

BOSS DEFROST

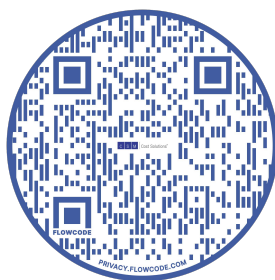

BOSS DEFROST

CHANGING THE WAY WE THAW FROZEN FOOD

Boss Defrost is a simple plug and play device that can be utilized almost anywhere in the kitchen. Take slacking away from the sink! Large tasks, small tasks. Set up a basin with frozen food, a Boss Defrost, and a few gallons of water (around 68 degrees is best) then let it efficiently hum away in a corner.

Boss Defrost's powerful circulating pump combines water agitation and a high flow rate to help cooks achieve defrosting results while keeping an eye on water efficiency.

Boss Defrost mimics the USDA's running water method (also called "slacking") to safely thaw frozen food but reduces water use by 98.5%.
