

The Smarter Cleaning Machines

Kaivac develops science-based hygienic cleaning systems that protect the health of building occupants while raising the value of cleaning operations.

Kaivac's cleaning technologies are designed from the start to remove the maximum amount of potentially harmful soils and bio-pollution in the most cost-efficient manner possible. Just as important, Kaivac incorporates scientific measurement into its systems to ensure hygienic outcomes for total facility wellness. Because, when it comes to potentially harmful microbial contamination, it's important that you remove it, then prove it.

Kaivac created No-Touch Cleaning® systems to clean restrooms with extreme soil removal and empower workers to clean hygienically without touching contaminated surfaces.

The Kaivac UniVac® is a compact one-fill "no-mop" kitchen cleaning machine that offers a simple approach to cleaner, safer tile floors in a nimble single-piece package.

AutoVac Stretch™ is a simple high-speed cleaning system for wide-area hard surface areas like food courts, cafeterias, event spaces, banquet halls, and more.

Program Features & Benefits

- Innovative equipment for cleaning restrooms, kitchens, and large and small area hard surface floors
- Product warranties extendable to select parts
- Machines proven to decrease cleaning time by 50%, while removing up to 99% of contaminants
- Access to free virtual product trainings
- Competitive pricing
