

## Web-based Menu Planning and Production System

*NetIMPAC* is a web-based program for menu planning, recipe creation, production, costing, and order generation.

For the foodservice manager, *NetIMPAC* improves efficiency and provides valuable tools to help control food cost.

### It Allows Flexibility!

- Menus can be developed at the community level based on level of care and regional preferences
- Start with a National or Regional Template menu, or create your own menu
- Editing is made easy with the option to spread menu items to therapeutic diet restrictions
- Quickly view how menu changes affect cost and nutrition
- The database comes with over 22,000 recipes! These recipes can be copied and edited, or you can create your own recipes.

### It Increases Efficiency!

Cycle Menu Planning Reports can be printed or viewed for all diet restrictions.

- At A Glance Menus
- Diet Spreadsheets
- Nutrition Analysis
- Average Daily Cost

Production and Purchasing Reports are available based on menu, diet census tally, and popularity indices.

- Production Worksheet
- Production Recipes
- Purchase Order

### It's Integrated!

- Product selection and pricing is imported to provide up-to-date menu cost

### Training and Customer Support

- Easy to follow eLearning sessions available online
- How-To Guides accompany each eLearning session
- Live training webinars provided weekly
- Customer support available 24/7

### NetTraycard

- Resident data management system
- Generate tray cards, nourishment labels, and multiple tally reports
- Available for purchase as an add-on to the *NetIMPAC* system
